

Setup Guide for SQ Remote on your iOS device

Important: Follow the Quick Start Guide for the SQ Blaster and download SQ Remote to your iPhone, iPod touch or iPad.

1		Verify that SQ Remote finds and connects to your SQ Blaster unit.
2		Add command codes for your equipment to your SQ Blaster from the built-in database.
3		Add control pads to SQ Remote.
4		Add Controls to your control pads and link them to the command codes for your equipment.

Each of the steps above is described in detail on the next page.

Setup Details

Step 1 - Verify that SQ Remote detects your SQ Blaster

With your iOS device connected to the same Wi-Fi network as your SQ Blaster:

Go to Setup → SQ Blasters and Devices

- Tap on the setup image to enter the setup area of the application. (If this is the first time you have started SQ Remote - select "No Thanks" to the startup message.)
- Select "SQ Blasters and Devices"
- You should see your blaster unit with the word "Connected" after it.

If your blaster is not connected or is not listed go to the help area of SQ Remote or the support pages at www.squareconnect.com for additional help.

Step 2 - Add command sets (Devices) to your SQ Blaster

Go to Setup → SQ Blasters and Devices → Add New Device to Blaster

For each device that you want to control with the blaster:

- Select the brand of equipment e.g. "Samsung".
- Select the type of equipment e.g. "TV"
- Select the infrared code set that works best for your equipment.

Tips for selecting the correct infrared code set:

Place the blaster in a position where it is facing the equipment that you want to control. You can then test the commands during step 3 above.

Repeat this process to add all code sets for all your devices.

Step 3 - Add control pads

Go to Setup → Control Pads

Tap the "Edit" button in the top right hand corner of the Control Pads screen.

Tap the "+" button in the top right hand corner of the Edit Control Pads screen.

- Enter a title and select an image for the control pad.
- Tap the "Save" button to save the control pad.

Repeat this process to add control pads for your activities such as Watching Movies, Watching TV, or Listening to Music.

Return to the setup area by tapping the "Back" button twice and then tap "Close" to exit to the carousel.

Step 4 - Add controls to your control pads and link them to commands

Bring the control pad that you want to edit to the front of the carousel. You can do this by tapping on its image, or by swiping left or right across the screen to rotate the carousel.

- Tap on the front control pad to open it.
- Tap the "Edit" button to enter "Edit Mode"
- Tap the green "+" button to add controls
- Select Preset Control Panels in the picker (these are templates that let you add multiple buttons at once), then tap the button "Preset Control Panel".
- Select the type of controls that you want to add in the picker, then tap the button "Next: Link Devices" Your choice of preset control panel will depend on the device(s) that you want to control and the type of activity. You can always edit and customize your controls later.
- For each type of control that is present in the control panel that you selected, you now choose the device that should be controlled from the list of devices that you added in **Step 2**.
- Tap "Finish" to add the controls to your control pad.

Repeat the steps above for the side panels in your control pad until you have added all the controls that you need, then exit the "Edit Mode" by tapping the "Back" button.

Checking your buttons are correctly assigned to commands

Sometimes when you link a preset control panel to your device code sets some of the buttons may not be linked correctly.

You can easily check your buttons to see if they are "linked" and correct them if necessary.

- In your control pad, tap the "Edit" button to enter "Edit Mode"
- Tap the  button.
- Buttons that display a green  symbol are assigned to a command.
- Buttons that have a grey  symbol are unassigned.
- To assign a button to an infrared command, select a button - its symbol will turn red: 
- Then tap the "Assign" button. You will then be able to select any command from any of the devices that you added in **Step 2**. Simply select the device you want to control, then on the next screen select the command. You can test the commands directly to make sure that you are getting the right one before selecting it.

Exit the "Edit Mode" by tapping the "Back" button.
